Re: End-Of-Sale of Vevo Whole Body Imaging Setup

Dear Valued Customer,

FUJIFILM VisualSonics, Inc. (VSI) would like to thank you for being a longstanding customer. We are committed to providing the highest quality products and services to our customers, ultimately to empower ground-breaking research into the advancement of human health.

The Vevo Whole Body Imaging Setup is being retired.

As of January 1, 2026, VSI ceased offering the Vevo Whole Body Imaging Setup for sale. Technical Service and Scientific Support this product will continue until December 31, 2027. Available support includes:

- Coverage of the product in valid annual service contracts.
- Stocking of replacement parts where possible.
- Scientific applications support regarding the use of the product in your research.

A direct replacement product will not be offered by VSI at this time. As an alternative, our Extended 3D Motor remains available, enabling ultrasound and photoacoustic image acquisitions up to 60 mm in length. Pairing this tool with a lower-frequency transducer, which inherently has a larger field-of-view, facilitates 3D volumetric scans of large areas of the mouse body.

As always, we appreciate your business and look forward to providing you with the best tools to assist you in attaining your research goals.

Regards,

Greg Nesbitt

Vice President, Global High Frequency
