

15 May 2019

Dear Valued Customer,

It is our goal to ensure that you receive timely updates about FUJIFILM VisualSonics, Inc. products.

We recently made the decision to discontinue selling the Vevo 1100, Vevo 2100, and Vevo LAZR Imaging Systems. These systems, based on technology originally launched in November 2008, brought many key advancements to preclinical imaging and we understand that, at this time, these systems may remain central to your cutting-edge research.

We wish to inform that technical service and support of the Vevo 1100 / 2100 / LAZR systems, and their associated MS / LZ transducers, will continue until December 31, 2023, unless otherwise specified per local law or contractual agreement. We will continue to monitor and address, over the remaining life and EOL time period, any critical vulnerabilities to insure compliance with standards.

Moving forward, we would like also to invite you to learn more about the Vevo 3100 and Vevo LAZR-X Imaging Systems, our new products which provide unparalleled frame rates, depth of resolution, and workflow efficiency. Please contact us for more information or visit our website www.visualsonics.com.

As always, we appreciate your business and look forward to providing you with the best tools to assist you in attaining your research goals.

Regards,

Greg Nesbitt
Vice President, Global High Frequency
